

Topic

Coaching SAP Netweaver BI

Customer

Hager Electro SAS, Obernai, France

Task

Coaching in regards to tool choices for sales and distribution reporting with SAP NetWeaver BI.

Supporting the implementation of reports.

Implementation

At the beginning of the project, the tool selection process for sales and distribution reporting with SAP NetWeaver BI was carried out. Various tools were first introduced as well as detailing their differences in functionality and fields of application. Ultimately, it was decided that reporting in Excel with Business Explorer Analyzer would be the chosen approach.

To a large extent the customer created their own queries, although PIKON supported this activity with 'Tips & Tricks' and optimisations techniques in query designer and data modelling. Furthermore, the authorisation rights of 7.x analyses were converted.

Finally, the reports were converted into complex workbooks and made available to the users. The workbook design was particularly challenging, which involved optimisations and implementation of custom macros.
