

Issue

SAP Implementation at FLOW COMP

Customer

FLOW COMP Systemtechnik GmbH

Systems and electronic devices for gas measurement systems.

FLOW COMP belongs to the ELSTER-INSTROMET group (Ruhrgas Industries) and employs about 30 men and women

Task

SAP All-in-one implementation using release 4.6c on the SAP system of the ELSTER group

Realisation

PIKON was assigned the design and implementation of the SD and CO processes. The main emphasis was on the project business of FLOW COMP, which designs and produces gas devices using own and external components. Process support was provided from the quotation phase, through the project planing, up to implementation and documentation. Amongst others, the following tools have been applied: Easy Cost Planning (project planning), DVS (documentation administration system for the filing of the project documentation) and CATS (Cross Application Time Sheet, person-related time-recording tool for the staff members). A tailor-made product profitability analysis was developed for the evaluation of electronic components integrated in, and sold with, the devices.
