

Topic

Introduction of preference processing

Customer

Keiper GmbH & Co. KG

Manufacturer of structures and components for automobile seats.

Task

The preference values for the individual materials were not determined by the SAP system but via manual steps outside the system. The suppliers' declarations, however, were already being registered in the SAP system.

This determination of the values was not "customs-proof"; it is a customs requirement that it must be possible to retrace the calculation at any time. The SAP preference calculation under ERP 6.0 offers the opportunity to make a calculation that can be retraced accordingly if no configurable materials are used.

Implementation

Review of the actual situation and requirements

Customizing the preference calculation

Provision of the following functions:

- Consolidation of the suppliers' calculations
- Implementation of the preference calculation in individual or collective run

Documentation for the users

User training sessions
