

Topic

Introducing and piloting SAP's eXchange Infrastructure

Customer

Elster Group

Task

PIKON introduced SAP-XI as a central integration system for the Elster Group. The successful installation was followed by a pilot project to consolidate the data from various systems and prepare the data for reporting in Hyperion.

Implementation

The focus of this pilot project was the consolidation of sales data from all over the world and then transferring it to one of the group's reporting systems. The source data is provided by non-SAP systems in flat files and by SAP systems through an ABAP-proxy-connection. During the mapping stage, data is edited and the distribution channels re-assigned & accumulated according to the group's requirements.

PIKON designed and implemented the following steps:

- Adjustments to the system after installation
- Analysis of the projects requirements
- System customization according to the customer's request
- Project management
